

# Product safety advice Australia

Important Information regarding the Purchase of **Welding Screens**

## **PRODUCT CAUTION**

Various welding screens available in the market identified only as “Welding Grade” and carrying no supporting evidence of AS/NZS 3957:2014 conformance.

## **Identifying features:**

Similar in appearance to Welding Screens certified under Australian Standards (AS/NZS 3957:2014), however not supported by independent test results or current Certification.

Screens will often appear to offer greater clarity of vision through them.

Typical screen colours that do not pass AS/NZS 3957:2014 include: bronze, yellow, blue and some green screens.

## **What are the hazards?**

1. May not fully protect welders and nearby workers against hazardous radiation generated during welding processes.
2. May not protect welders and nearby workers against Photokeratitis (commonly known as Welder’s Flash or Flash Burn).
3. May leave employers open to compensation claims and litigation.

## **How to protect yourself and your employees**

Before purchase: Insist on sighting independent test results verifying the efficacy/ safety of the welding screens and/or official documentation eg. AS/NZS 3957:2014 Certification or Kanga Certification®.

# Flexshield Welding Screens -

the only Australian-made screens that are Kanga Certified.

Kanga Certification is your guarantee of quality. It's proof-positive that every screen has passed every test. Including the toughest test of all. ***The test of time.***

- Fully compliant with AS/NZS 3957:2014
- 3rd party certification
- Test report supplied on request
- 10-year replacement guarantee
- Extruded flexible material
- 2mm thick screen for strip curtain style
- 1mm thick screen for sheet curtain style
- Anti-corrosive tracking system options
- Tailor made to your application
- 3957:2014 trained and qualified technicians
- Each screen provided with Kanga Certification certificate
